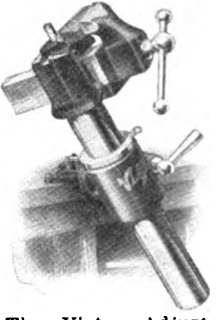
Victor Vise

The Victor vise will easily handle odd-shaped work as well as ordinary shapes; it is manufactured by the Victor Vise Company, 15, 17, 19 W. Washington Street, Springfield, O. It can be quickly and easily positioned, affording the most convenient position at which to work, within range of the vise, either in swiveling or elevating.



The Victor Adjustable Vise.

Only one locking lever is required for all swivels. The vise automatically holds its vertical position by a locking collar while swiveling, and the one lever tightens all parts rigidly in the working position. The vise cannot jump or rattle when chiseling or hammering as all parts are clamped together.

These vises are to be had with solid or swivel jaw and swivel base, solid or swivel jaw, ranging in price from $4 to $26. Surface plates are made, which can be used in any Victor vise base, either square or round, listed at from $3 to $6.
